Contents

Preface **xi**

I Vectors **1**

1 Vectors **3**
1.1 Vectors . . . 3
1.2 Vector addition . . . 11
1.3 Scalar-vector multiplication . . . 15
1.4 Inner product . . . 19
1.5 Complexity of vector computations . . . 22
Exercises . . . 25

2 Linear functions **29**
2.1 Linear functions . . . 29
2.2 Taylor approximation . . . 35
2.3 Regression model . . . 38
Exercises . . . 42

3 Norm and distance **45**
3.1 Norm . . . 45
3.2 Distance . . . 48
3.3 Standard deviation . . . 52
3.4 Angle . . . 56
3.5 Complexity . . . 63
Exercises . . . 64

4 Clustering **69**
4.1 Clustering . . . 69
4.2 A clustering objective . . . 72
4.3 The k-means algorithm . . . 74
4.4 Examples . . . 79
4.5 Applications . . . 85
Exercises . . . 87

5 Linear independence **89**
5.1 Linear dependence . . . 89
5.2 Basis . . . 91
5.3 Orthonormal vectors . . . 95
5.4 Gram–Schmidt algorithm . . . 97
Exercises . . . 103

II Matrices **105**

6 Matrices **107**
6.1 Matrices . . . 107
6.2 Zero and identity matrices . . . 113
6.3 Transpose, addition, and norm . . . 115
6.4 Matrix-vector multiplication . . . 118
6.5 Complexity . . . 122
Exercises . . . 124

7 Matrix examples **129**
7.1 Geometric transformations . . . 129
7.2 Selectors . . . 131
7.3 Incidence matrix . . . 132
7.4 Convolution . . . 136
Exercises . . . 144

8 Linear equations **147**
8.1 Linear and affine functions . . . 147
8.2 Linear function models . . . 150
8.3 Systems of linear equations . . . 152
Exercises . . . 159

9 Linear dynamical systems **163**
9.1 Linear dynamical systems . . . 163
9.2 Population dynamics . . . 164
9.3 Epidemic dynamics . . . 168
9.4 Motion of a mass . . . 169
9.5 Supply chain dynamics . . . 171
Exercises . . . 174

10 Matrix multiplication **177**
10.1 Matrix-matrix multiplication . . . 177
10.2 Composition of linear functions . . . 183
10.3 Matrix power . . . 186
10.4 QR factorization . . . 189
Exercises . . . 191

11 Matrix inverses **199**
11.1 Left and right inverses . . . 199
11.2 Inverse . . . 202
11.3 Solving linear equations . . . 207
11.4 Examples . . . 210
11.5 Pseudo-inverse . . . 214
Exercises . . . 217

III Least squares **223**

12 Least squares **225**
12.1 Least squares problem . . . 225
12.2 Solution . . . 227
12.3 Solving least squares problems . . . 231
12.4 Examples . . . 234
Exercises . . . 239

13 Least squares data fitting **245**
13.1 Least squares data fitting . . . 245
13.2 Validation . . . 260
13.3 Feature engineering . . . 269
Exercises . . . 279

14 Least squares classification **285**
14.1 Classification . . . 285
14.2 Least squares classifier . . . 288
14.3 Multi-class classifiers . . . 297
Exercises . . . 305

15 Multi-objective least squares **309**
15.1 Multi-objective least squares . . . 309
15.2 Control . . . 314
15.3 Estimation and inversion . . . 316
15.4 Regularized data fitting . . . 325
15.5 Complexity . . . 330
Exercises . . . 334

16 Constrained least squares **339**
16.1 Constrained least squares problem . . . 339
16.2 Solution . . . 344
16.3 Solving constrained least squares problems . . . 347
Exercises . . . 352

17 Constrained least squares applications **357**
17.1 Portfolio optimization . . . 357
17.2 Linear quadratic control . . . 366
17.3 Linear quadratic state estimation . . . 372
Exercises . . . 378

18 Nonlinear least squares **381**
18.1 Nonlinear equations and least squares . . . 381
18.2 Gauss–Newton algorithm . . . 386
18.3 Levenberg–Marquardt algorithm . . . 391
18.4 Nonlinear model fitting . . . 399
18.5 Nonlinear least squares classification . . . 401
Exercises . . . 412

19 Constrained nonlinear least squares **419**
19.1 Constrained nonlinear least squares . . . 419
19.2 Penalty algorithm . . . 421
19.3 Augmented Lagrangian algorithm . . . 422
19.4 Nonlinear control . . . 425
Exercises . . . 434

Appendices **437**

A Notation **439**

B Complexity **441**

C Derivatives and optimization **443**
C.1 Derivatives . . . 443
C.2 Optimization . . . 447
C.3 Lagrange multipliers . . . 448

D Further study **451**

Index **455**
